

START-UP PROGRAM AGE41

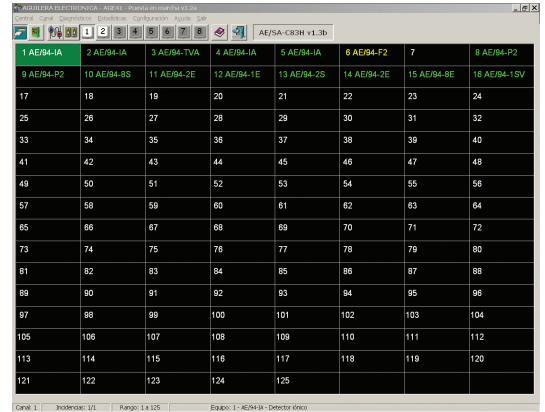

Description

The objective of the AGE41 program is to facilitate the set-up and maintenance of facilities based on analogue AE / SA-C1, AE / SA-C2, AE / SA-C8, AE / SA-C23H and AE / SA- C83H

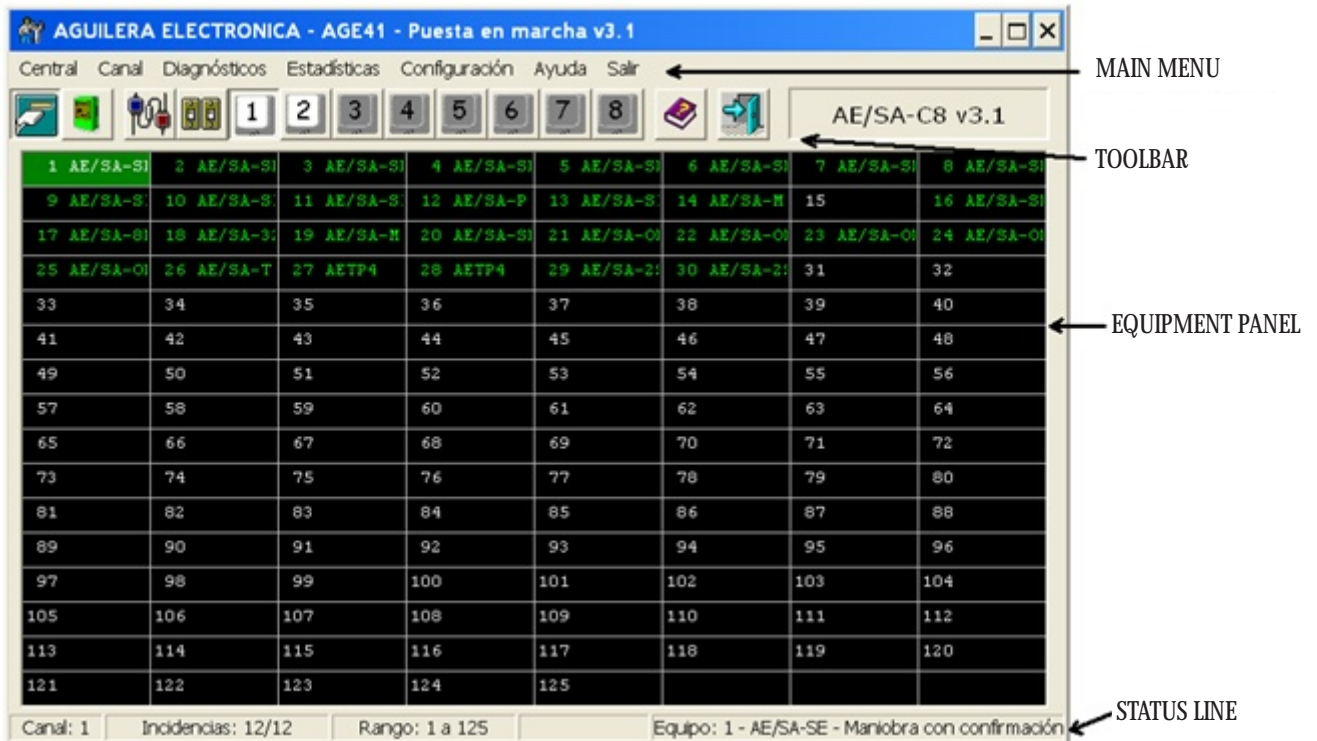

To do this, it allows us to:

- o Determine which equipment is connected to a central.
- o Check that these devices work correctly.
- o Act on the outputs of these equipment.
- o Export the structure of the channels to files, which the AGE42 customizer can read later.
- o Obtain information on the incidents that occur in the installation.
- o Monitor the general operation of the plant, through diagnostics.
- o Restart and download the statistical information stored in the exchange.

In short, the program allows you to check the status of an installation without having to have the customized control panels.
