

Alarm Control Panel for Mobile Telephony AE/AX12S y AE/AX30S

Description

This unit is designed and manufactured by AGUILERA ELECTRONICA, in accordance with UN EN54-2 for fire monitoring and controlling the operation of equipment and other parameter changes that occur in mobile telephone cabinets and similar enclosures.

Consisting of:

- A stabilised 230 V power supply, with input protection, 27 and 12 Vdc outputs and battery charger.
- Supervised loop that controls a zone of fire detectors and pushbuttons, with signaling of: 1st fire level, 2nd level, fault and service.
- Monitored loop for automatic fire extinction that can be programmed to trip on the first or 2nd fire level.
- Relays: fire, monitored for general fault, air-conditioning shutdown and repetition of external alarms, 1 and 14.
- Control of 14 up to 30 inputs according to model, individually selectable by normally open or closed contact, that are connected by means Sub-D37 pin connectors (2nd relay outputs, voltage-free by individually selectable open or closed contact).
